Samuel Giuseppe Mauli

Co-founder & Tech Lead · Software Architect

+55 (47) 99277-0701 samuel.mauli@gmail.com github.com/samuelmauli Curitiba, PR — Brasil

I lead development teams and own product delivery end to end — from the business problem to what actually runs in production. Co-founder of Doublethree and tech lead, with 10 proprietary products live, mobile apps on both stores, and AI running inside the client perimeter.

EXPERIENCE

Co-founder & Tech Lead

2026 — Present

One Way

I lead the engineering of a multi-product operation: I define the architecture, prioritize the technical roadmap and own the production SLA across the whole estate.

- Running dozens of projects and production environments in parallel, with 24/7 monitored availability, on-call duty and incident response within the SLA agreed with each client.
- Own the end-to-end infrastructure — server fleet, provisioning, network, deploy, observability, cost and hardening — and the continuity plan: disaster recovery with defined RPO/RTO and a backup restore proven in a real drill, not just on paper.
- Cut the whole estate exposure surface by consolidating access behind a private network, federated SSO and centralized authorization — no internal service exposed straight to the internet.
- Set the engineering process (code review, CI/CD, versioning and standards) that keeps several teams shipping in parallel without breaking production.

Co-founder & Head of Technology

2024 — Present

Doublethree

I direct the technology and delivery of a portfolio of proprietary and client products — from the business problem to what runs in production and ongoing support.

- 10 proprietary products live and 4 apps published on both stores, with multiple client projects run in parallel, each with its own release cycle, maintenance and SLA.
- Architected and operate the server fleet behind all of it: provisioning, zero-downtime deploy, observability, backup with proven PITR (real 38-min restore) and cost control.
- Shipped AI running inside the client perimeter — locally served LLMs, sensitive data that never leaves the house — unblocking AI adoption in regulated sectors (legal, health, public tenders).
- Own production reliability: uptime monitoring, alerting and incident response, keeping products live as a service — not a one-off delivery.

Developer

2025 — Present

Grupo Negócios Públicos (Vanlink)

I work on the SGI/CRM platform and two Flutter apps of a real ERP operation in production, covering backend, mobile and critical integrations end to end.

- Cross-stack backend (PHP, Go, Python and Node) over ERP business rules with money on the line: payment orchestration, billing and financial flows that cannot fail.
- Fixed real performance and resilience bottlenecks in production — document automation cut from 8 minutes to 10 seconds per document, and server-side integrations that survive restricted egress and network outages without dropping the flow.
- Ship into a live ERP with active users, where a bad deploy stops the operation — demanding careful migration, a ready rollback and validation before going up.

STACK

AI / ML
LLMs · RAG · vLLM · BYOK · ONNX · TensorFlow · PyTorch · NLP

LANGUAGES
Java · Python · Go · Rust · PHP · TypeScript · Dart · Swift

MOBILE
React Native · Expo · Flutter · SwiftUI

BACKEND
Spring Boot · NestJS · FastAPI · Laravel · Node.js · Next.js

CLOUD / DEVOPS
AWS · Docker · Kubernetes · CI/CD · Caddy · Prometheus

DATA
PostgreSQL · PostGIS · MySQL · MongoDB · Redis · pgvector

EDUCATION

B.Sc. in Computer Science

Universidade Positivo

2022 — 2026
